

Subject: Why the air in your home could be killing you!

June 20, 2015

Dear Nick,

A breath of fresh air...inside your home? If that's what you thought you were getting think again!

We actually keep fresh air out of our homes when we seal our homes to make them energy efficient and end up breathing stale, recycled air full of germs, mold, dust and bacteria...that is until now.

For now Bill Converse, CEO of Air Restore, has invented brand new technology that restores the energy of outdoor air to indoor air allowing it to clean itself organically and more economically than the air filters and ionizers currently on the market.

Bill put this new technology in a product he calls an Air Naturalizer that will turn the air in an 800 sq.ft. space into outdoor air. By breathing outdoor air you greatly reduce your chances of getting allergies, colds, and other illnesses. Now you can do the same breathing indoor air.
